DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by McCutchen, US Patent 5,040,081. McCutchen discloses an audiovisual synchronization method using audio signature comparison comprising first and second sets of high resolution (audio) data from a slave and master video source (figure 4), an analyzer 78 and synchronizer 80. The analyzer 78 digitizes the audio data from the video sources (A/D converter 43) and holds the data to a spectral frame buffer 44. Column 6 lines 45-59 disclose that an envelope information analysis concerns itself with the amplitude (magnitude) of the inputted signals. The data from the spectral frames are inputted to cross-correlator board 55. The table in column 9 discloses that the “lock” comparison buffer for envelope values is done over one video frame or compared 10 at a time. Thus, McCutchen discloses computing a magnitude only spectrogram for the sets of high resolution data and having a spectrogram slice length and step size that is 1/29.27 second (1 video frame). The cross-correlator board 55 computes a one-dimensional cross-correlation of the magnitudes and selects an alignment based on the cross-correlation. Claims 1 and 2 are met.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2644

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over McCutchen.

McCutchen does not disclose that the cross-correlation further comprises performing a FFT-based one-dimensional convolution method. However, it was well known and practiced in the art at the time of invention to use such cross-correlation methods and it would have been obvious to one of ordinary skill in the art to use the claimed method for its appropriate benefits.

Allowable Subject Matter

Claim 4 is allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lu, US Patent 6,751,360; Hu, US Patent 6,483,538.
